Experience

- 2017 – Current 📖 **Graduate Research Assistant**, Vision-Guided and Intelligent Robotics Laboratory
- Neurobiological and Psychobiological Signatures of Vocal Effort in Early Career Teachers
Built machine learning tools to analysis voice acoustic signals, sEMG, and fMRI to understand neurological and biological causes for muscle tension voice disorders.
 - Neck Surface EMG Signals for the Early Detection of Vocal Fatigue in Student Teachers
Built the data collection protocol in both hardware and software for this study. Used classifiers such as SVM, MLP, and CNN to detect vocal fatigue from collected data.
 - Object Detection and Pose Estimation using Embedded Devices
Deployed YOLO algorithm on a Raspberry Pi with two stereo cameras for object detection and pose estimation and produced comparable results to state-of-art deep learning pose estimation model.
 - Built Spotmicro - a 3D-printed Robotic Dog
Built the first iteration of SpotMicro for MU Robotics club. Created a platform to help undergraduate and graduate students to learn, practice what they have learned in class.
