PROFESSIONAL SUMMARY

Machine learning and robotics researcher. Exhibits profound expertise in **Deep Learning, Computer Vision, Robotics and Pattern Recognition**. Specialized in fostering interdisciplinary collaborations, notably with speech language pathology, and underground mining related applications. Advocate for open source technologies. Seeking to leverage extensive AI/ML expertise to address complex real-world challenges and drive innovation in technology application.

EDUCATION

University of Missouri - Columbia	Ph.D in Electrical and Computer Science	2017 – 2024
University of Missouri - Columbia	BS in Electrical Engineering	2014 – 2017
University of Missouri - Columbia	BS in Computer Engineering	2014 – 2017

EXPERIENCE

Post Doctorial Fellow | *Missouri S&T | Department of Mining & Explosives Engineering* Oct 2024 – Current

- Robotics researcher for CDC NIOSH Initiative to empower miners for self-escape
 - Lead research on enhancing deep learning-based object detection algorithms such as YOLO in mine safety applications.
 - Integrate advanced LiDAR and thermal camera on Boston Dynamics’ Spot quadrupled robot with ROS2.
 - Develop autonomous navigation solutions with Spot for underground miner exploration and miner safety monitoring.

Graduate Research Assistant | *University of Missouri - Columbia | ViGIR Lab* Aug 2017 – Sep 2024

- PhD Thesis: Confounded predictions in machine learning
 - Detect, quantify, and mitigate confounding factors in machine learning and deep learning models.
- Student Investigator for NIH R01DC018026 Aug 2019 – Sep 2024
 - Developed classification pipeline with transformers and CNN using Pytorch and Matlab for analyzing both sEMG and fMRI data.
- Student Investigator for NIH R15DC015335 Aug 2017 – Aug 2019
 - Developed machine learning algorithms with SVM, K-means, and MLP using scikit-learn and Pytorch for analyzing sEMG data

Other projects

- SpotMicro | *University of Missouri - Columbia | ViGIR Lab* 2022 – 2023
 - An open-source quadruped robot for the MU Robotics club. Operated by a Raspberry Pi 4 and integrated with ROS.
- Object Detection and Pose Estimation using Embedded Devices | *University of Missouri - Columbia | ViGIR Lab* 2019
 - Applied YOLO on a Raspberry Pi 3 with stereo-vision cameras for object detection and pose estimation.

TECHNICAL SKILLS

Programming Languages: Python, C/C++/CUDA, Matlab, HTML

Libraries: pytorch, tinygrad, scikit-learn, transformers, ultralytics, mmdet, ROS 2, Gazebo, ONNX

Experienced Models: SVM, GA, MLP, CNN, RNN, transformers, ViT, DETR, YOLOs, Llama

MLOps and API Tools: Git, Docker, Kubernetes, Github Actions for CI/CD

Operating Systems: Linux(preferred), Windows

Languages: English, Chinese

OTHER ACTIVITIES

Academic Paper Reviews: EMBC2019/2020/2021, CEC2023, Applied Sciences, TAI

Open-Source Project Contributions: tinygrad, huggingface transformers
